

IN THE CLAIMS:

Please cancel claims 18 and 25-30 without prejudice.

A rewritten version of the claims is as follows:

1. A system for illustrating sound and text comprising:

a book with pages including illustrations and/or text, at least some of said pages including a magnetic signature;

a book holder adapted to accept said book, said book holder having a reading surface with a magnetic signature sensor, cartridge slot, a reading controller, a speaker, and a power supply; and

a cartridge adapted to be inserted in said cartridge slot, said cartridge including stored audio representations related to said illustrations and/or text of said pages;

wherein said magnetic signature sensor is predisposed to detect and make direct contact with said magnetic signature on said pages as they are turned by a user viewing said book, and wherein said reading controller is adapted to interact with said magnetic signature sensor to determine a given page that said user is viewing responsive to said direct contact between said magnetic signature sensor and said magnetic signature on said given page, and to retrieve audio representations of illustrations and/or text stored on said cartridge corresponding to said page or pages being viewed by said user and to reproduce audible sounds related to said retrieved audio representations through said speaker for listening by said user.

2. The system according to Claim 1 wherein said magnetic signatures are attached to at least some of said pages in a specified location in order to be detected by said magnetic signature sensor.

3. The system according to Claim 1 wherein said magnetic signature sensor further comprises one or more individualized reading elements, said reading elements pre-aligned on said reading surface in order to correspond with said magnetic signatures at their specified locations.

4. The system according to Claim 1 wherein said reading surface is a substantially flat platform.

23. The system according to Claim 1 wherein said power supply is communicably coupled with said reading controller and said speaker, said power supply further adapted to control activation and de-activation of said book holder.

6. A method for illustrating sound and text utilizing a book holder including a reading controller, a speaker, and a magnetic signature sensor with one or more reading elements, said book holder adapted to accept a book with pages including illustrations and/or text, at least some of said pages including magnetic signatures, the method comprising the steps of:

attaching said magnetic signatures in a specified location on said pages;

creating contact with the specified location of a given magnetic signature on a given page of said pages by utilizing said reading elements of said magnetic signature sensor;

correlating said specified location of said given magnetic signature on said given page with stored audio representations related to said illustrations and/or text of said given page; and

delivering audible sounds corresponding to said stored audio representations via said speaker to accompany the illustrations and/or text on said given page.

7. The method according to Claim 6 wherein said attaching step is followed by placing said book on said book holder in a position wherein said magnetic signatures on said pages of said book are properly aligned with said reading elements of said magnetic signature sensor.

8. The method according to Claim 7 wherein said placing step is followed by turning said pages of said book in order to view the illustrations and/or text therein.

9. The method according to Claim 8 wherein said turning step further includes the step of identifying the illustrations and/or text on said pages utilizing said magnetic signatures attached in specified locations on said pages detected by said reading elements of said magnetic signature sensor.

10. The method according to Claim wherein said delivering step is preceded by retrieving the stored audio representations of said illustrations and/or text retrieved corresponding to said page or pages being viewed by said user.

11. The method according to Claim 10 wherein said retrieving step is followed by reproducing the stored audio representations of said illustrations and/or text retrieved corresponding to said page or pages being viewed by said user.

12. A method for electronically storing text and audio content for use in an electronic book reader system, the method comprising the steps of:

creating electronic equivalent representations of said text and audio content;
storing said electronic equivalent representations in a first electronic memory

space; and

downloading a duplicate of said electronic equivalent representations stored in said first electronic memory space into a second electronic memory space housed within said electronic book reader system, said downloaded duplicate of said electronic equivalent representations stored in said second electronic memory space according to pages of said electronic book reader system.

13. The method according to Claim 12 wherein said creating step further includes recording sounds and/or words corresponding to illustrations and/or text of a book.

14. The method according to Claim 12 wherein said storing step further includes formatting said electronic equivalent representations into a digital format.

15. The method according to Claim 12 wherein said storing step further includes sorting said electronic equivalent representations into a plurality of addresses (e.g., A0, A1, A2...An) within said first electronic memory space.

16. The method according to Claim 12 wherein said sorting step is following by packaging said electronic equivalent representations stored in said first electronic memory space utilizing a chip housed within a cartridge means.

17. The method according to Claim 16 wherein said packaging step further includes inserting said cartridge means into said electronic book reader system adapted to receive said cartridge means.

19. An electronic book reader system for illustrating sound and text comprising:
a reading surface adapted to accept a book with pages, said pages including illustrations and/or text, at least some of said pages including magnetic signatures attached at specific locations;

a book support surface adjoined to one side of said reading surface, said book support surface adapted to support said page or pages viewed by a user;

a magnetic signature sensor including one or more individualized reading elements, said magnetic signature sensor predisposed to detect and make direct contact with said magnetic signatures on said pages as they are turned by said user viewing said book;

a bracket coupled to said reading surface adapted to hold said book in place while said page or pages are turned;

a reading controller adapted to interact with said magnetic signature sensor in order to determine the given page or pages said user is viewing responsive to said direct contact between said magnetic signatures on the given page or pages and said magnetic signature sensor; and

a power supply communicably coupled with said reading controller adapted to activate and de-activate the functionality of said electronic book reader;

a cartridge slot within said electronic book reader adapted to receive a cartridge including stored audio representations related to said illustrations and/or text of said pages; and

AX
by said user,

a speaker communicably coupled with said reading controller adapted to deliver said audio representations for listening and reading along with said page or pages viewed

wherein said reading controller is adapted to retrieve and reproduce said audio representations of said illustrations and/or text stored on said cartridge corresponding to said page or pages being viewed by said user.

20. The system according to Claim 19 wherein said reading elements are pre-aligned on said reading surface in order to correspond with said magnetic signatures at their specified locations.

21. The system according to Claim 19 wherein said reading surface and said book support surface are substantially flat platforms.

22. The system according to Claim 21 wherein said reading surface and said book support surface are adjoined by a means adapted to fold in a manner allowing for both surfaces to meet for easy carrying of said electronic book reader system.

AB 23. The system according to Claim 19 wherein said reader further comprises a volume control adapted to control the volume of delivery of said audio representations for enjoyable listening by said user.

24. The system according to Claim 19 wherein said power supply is coupled with a Light Emitting Diode (LED) indicator for determining a state (e.g., On/Off) of said electronic book reader system.
